FINORA

Personal Finance Management System

Manage income, budgets, and savings with clarity.

One place to make sense of money

A beginner-friendly tracker brings daily records and monthly plans together.

Record

Add income and expenses with a category, date and payment method.

Plan

Set monthly category limits and see what remains at a glance.

Understand

Review summaries, category charts and savings goal progress.

Useful information first. Clear steps. No finance expertise required.

Built for people starting a budget

Primary users include university students, young professionals and first-time budgeters.

A typical visit

01 Sign in

02 Add records

03 Review dashboard

04 Set budget

05 **Check progress**

What users need to know

- **Record a purchase quickly**
  A short form captures the key details without friction.
- **Know the monthly balance**
  Income and expenses roll up into a useful summary.
- **Spot the biggest category**
  A category breakdown makes spending patterns visible.

Core pages cover everyday money tasks

A focused set of workspaces keeps the experience straightforward.

01

Dashboard

Balance, budgets, goals and recent activity

02

Transactions

Add, edit, search and filter income and expenses

03

Budgets

Set category limits and watch spending progress

04

Analytics

Compare cash flow and category trends

05

Savings goals

Track targets, contributions and progress

06

Profile & settings

Personal details, currency and account preferences

Also included: Login · Registration · Notifications · About · Contact

A FINORA dashboard for everyday decisions

A dark workspace puts balance, cash flow, categories, and recent activity in one view.

A realistic stack for a class project

Each layer has a clear responsibility, from the page to persistent records.

FRONTEND

HTML
Page structure

CSS
Responsive styling

JavaScript
Interaction and validation

BACKEND

Node.js
JavaScript runtime

Express.js
Routes and API logic

DATA

SQLite
Users, transactions and budgets

SQL
Queries and relationships

LIBRARIES

Chart.js

Lucide
Interface icons

HTML + CSS + JavaScript / Node.js + Express / SQLite

The browser talks to an API, then the database

Express validates requests and reads or writes records in SQLite.

USER

Pages & forms

→

FRONTEND

HTML · CSS · JS

DATABASE

SQLite records

Example data entities

USERS

id · name · email · password_hash

TRANSACTIONS

id · user_id · type · amount · category · date

BUDGETS

id · user_id · category · limit · month

Security belongs in the first version

Even a classroom prototype should model careful handling of financial data.

ACCOUNT SECURITY

- Hash passwords with bcrypt
- Use sessions or secure tokens
- Protect authenticated routes

DATA PROTECTION

- Validate input on the server
- Use parameterized SQL queries
- Tie every record to its owner

TESTING

- Test forms and error states
- Test create, read, update and delete
- Check mobile layout and calculations

DEMO SAFETY Use fictional sample data. Do not connect real bank accounts.

Five milestones make the work demonstrable

Each stage adds a piece that can be shown and reviewed.

1

Plan

Requirements, page map and wireframes

2

Build UI

HTML structure, CSS and responsive layout

3

Add behavior

Forms, validation, charts and filters

4

Build backend

API routes, database and authentication

5

Test & present

Fix issues, add sample data and prepare demo

Goal: a working full-stack prototype with a clear user journey.

A short walkthrough shows the core loop

Use fictional sample data and keep the demo focused on everyday tasks.

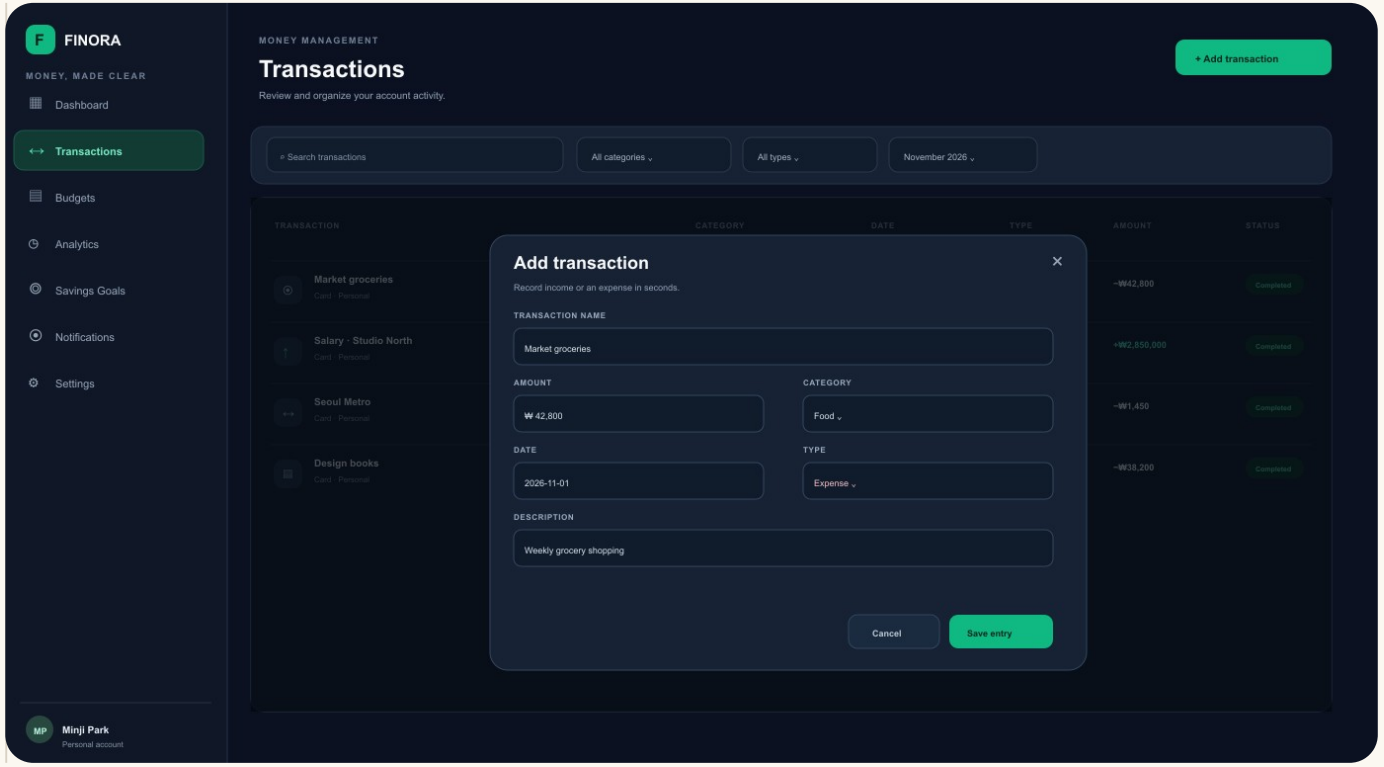

01 **Log in**
Enter the demo account

02 **Add a transaction**
Save a sample expense and category

03 **Review the dashboard**
Show the updated balance and chart

04 **Set a budget**
Create a limit and show what remains

05 **Explore reports**
Filter by month and explain the summary

THANK YOU

A clearer view of every won.

FINORA

Frontend development, backend APIs, database design and practical user experience in one useful web application.
